### DETAILED ACTION

This Office Action is in response to amendments and remarks filed July 17, 2005.  
Claims 23-26, 28-31, 34-36 and 55-67 are currently pending.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 56-66 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese publication of Suzuki et al. (JP 07-280944, published October 27, 1995).

Regarding claims 56-66, Suzuki et al. disclose (see Figs. 2 and 9) an imaging apparatus, comprising: a photoelectric conversion device (CCD sensor 24) having a plurality of photoelectric conversion elements on a panel (substrate 23) and lead electrode portions on a principal surface (CCDs inherently have lead electrode portions); a wavelength converting member (fluorescence plate 26) arranged on the photoelectric conversion elements; a grounded conductive member (conductive member 22) arranged on (space between members are filled with insulating rubber; see paragraph 0040) the wavelength converting member; and a resin (containers 40 and 45 made of resin; see paragraph 0055) that seals at least a portion of the panel and at least a part of an end face of the conductive member wherein the panel and the conductive member are in close proximity with each other. Suzuki et al. also disclose (see paragraph 0037) the conductive member is aluminum, the conductive member

extends out (see Fig. 3) as claimed, and the thickness is 100 microns or less (.01mm; see paragraph 0037).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 23-26, 28-31, 34-36, 55 and 67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. in view of Crowell et al. (U.S. Patent 5,804,832).

Regarding claims 23-26, 28-31, 34-36, 55 and 67, Suzuki et al. disclose the claimed invention as set forth above. Suzuki et al. further disclose (see Fig. 2) a housing (container 20) as claimed. Suzuki et al. do not specifically disclose a plurality of substrates as claimed. Crowell et al. teach (see Fig. 4) making a larger photoelectric conversion device with a plurality of substrates arranged adjacent to each other. Thus, Crowell et al. recognize that larger sensors can be obtained by using a plurality of substrates as claimed. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide a plurality of substrates arranged adjacent to each other in the apparatus of Suzuki et al. in view of Crowell et al. to cost effectively obtain larger image sensors for more comprehensive imaging.

***Response to Arguments***

5. Applicant's arguments filed July 17, 2005 have been fully considered but they are not persuasive.

Applicant's remarks are missing, and thus are found to be not persuasive.

Examiner further asserts that CCD image sensors inherently have lead electrode portions that are connected to control circuitry and that are sealed with the resin of Suzuki et al. It is impossible for CCD image sensors to be operable without lead electrode portions for proper biasing, control and readout. Thus, as set forth above, this rejection is proper.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

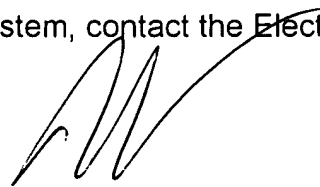

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
